

Moisture protection with a seal of quality

Remmers International Guarantee

Remmers International Guarantee

A strong partner takes the burden off your shoulders!

Who gives the guarantee on the products?

The Remmers Gruppe AG - the owner-managed family business founded in 1949 by Bernhard Remmers - is one of the internationally established companies in the building supplies, paint and varnish industry. The company, which employs over 1,500 staff and generates sales of around 308 million Euros, develops and produces construction chemical products for basement waterproofing and facade repairs, for concrete repair, industrial floor coatings, wood paints and varnishes for the furniture, window and door industries.

Remmers is represented throughout Europe and pursues a holistic approach. The Remmers Fachplanung GmbH, a subsidiary of the Remmers Gruppe AG, has its own group of external experts for the special segment of major projects. In cooperation with the Bernhard Remmers Institute for Analytics (BRIfA), RAL-certified specialist planning services and building engineering investigations are offered. The Bernhard Remmers Academy offers a platform for knowledge sharing and transfer with its training and further education courses. Remmers is looking for specialist companies that develop further and aim to become successful together with the RIG. All RIG specialist companies are personally invited to Lönningen to get to know Remmers.

What is the RIG?

A concept that guarantees success

RIG = Remmers International Guarantee*

Specialist companies that have been certified by Remmers as official RIG applicators have access to a variety of unrivalled benefits and additional services. After all, RIG specialist companies can work with and advertise to clients and building owners a 10-year product guarantee, which Remmers assures the specialist company. This creates trust and, as a unique selling point, is a major advantage in order procurement. Complementary training and further education, personalised support from experienced Remmers contacts, as well as a variety of marketing tools, are just some of the additional benefits.

RIG systems and partnerships

Only an exclusive circle of specialist companies have the opportunity to be certified with the new RIG. Among other criteria, the perfect application of the RIG systems is an indispensable requirement.

We create business growth for our customers!

Remmers actively supports RIG partners in project acquisition. And it does so with a clear conscience. Our RIG-certified specialist companies are highly trained experts who want to grow together with Remmers as their partner.

*The guarantee terms agreed between the RIG partner and Remmers apply exclusively.

Advantages of the RIG

More competence, more security, more orders

Remmers focuses on the premium quality of its product and system solutions. And because we are so sure of our cause, we are happy to pass on this assurance: The RIG is a seal of quality that stands for perfect planning and execution of technical performance. Processors, architects, planners and builders all benefit from the outstanding advantages of the RIG.

For the specialist company and applicator:

- 10-year guarantee on the products
- Powerful unique selling point for securing orders
- Enhanced skills through the wide range and regular Remmers training and development opportunities
- Expert advice and assistance from a personal point of contact
- Visible documentation of competence using the RIG quality seal
- Provision of professional marketing and promotional materials

For architects and planners:

- Planning security thanks to comprehensively tested product systems
- Verifiable quality through preparation of planning documents (specifications)
- Expert advice from Remmers and RIG specialist companies
- Low risk of complaints

For the building owner:

- 10-year product guarantee on the entire system can be passed on by the applicator
- Reliable quality of workmanship thanks to certified and specially trained RIG specialists
- Verifiable quality using precise records of all work performed
- Guaranteed quality

Funcosil FC

System product 1 - Hydrophobic impregnation as a cream

The creamy consistency of Remmers Funcosil FC ensures a long contact time of the product with the building material surface. During this time, the active substance is absorbed into the building material. The result is a high penetration depth and thus a high and more durable level of protection against water and pollutant absorption.

Funcosil FC sets new standards for the cost-effective hydrophobing of facade surfaces.

- Ready to use - from the bucket to the wall
- Simple processing, problem-free overhead work
- Low material consumption per m²
- No losses due to material outflow
- Required application quantity in just one work process
- Elimination of time-consuming auxiliary work
- Long-term effect due to high active substance contents
- Excellent price/performance ratio

Funcosil SNL

System product 2 - Clear, hydrophobic, solvent-based impregnation

Clear Funcosil SNL impregnation provides excellent long-term protection against driving rain for facades, thanks to its highly water-repellent properties, and reduces the tendency for soiling and greening.

The product is suitable for the post-treatment or refreshing of hydrophobic surfaces as well as for the subsequent impregnation of mineral paint coatings.

- Excellent penetration properties
- Reduces energy losses
- Porous, mineral building materials such as bricks, sandstone or limestone mineral plasters and aerated concrete
